

YOUR RELIABLE PARTNER IN PROFESSIONAL HYGIENE

CLEANING AGENTS / TECHNICAL EQUIPMENT / CONTRACT CLEANING

ISO 9001:2015

YOUR RELIABLE PARTNER IN PROFESSIONAL HYGIENE

What distinguishes us among other food industry hygiene suppliers is our problem solving approach. Many cleaning agents and technical solutions were developed especially to meet the needs of particular customers and once these products proved their effectiveness, they became a part of the general offer.

Thanks to highly qualified and experienced staff, our customers get professional hygiene counseling, as well as comprehensive range of products and services.

Radex was founded in 1989 by two brothers - Zbigniew and Tomasz Nagay. The first product was Termosol - a detergent for cleaning smoke houses. Thanks to its effectiveness, it has been on market for 30 years and it is still being used in hundreds of food processing plants in Poland.

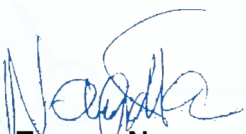

During the last three decades of dynamic development, the range of our products was enriched with new cleaning agents, professional technical equipment, contract cleaning and food processing plant hygiene consulting. Today Radex employs over 400 people and has a wide network of business partners in over 30 countries across Europe, Asia and South America.

comprehensive offer:
consulting, chemistry,
engineering, cleaning
service

over 30 years
of experience

more than
3000 customers
in Poland and abroad

certificates:
• ISO 9001:2015

THE PROBLEM SOLVING APPROACH

Why RADEX is unique on the market?

We use our wide experience in providing hygiene services for food processing plants of all kinds.

That's why we can quickly identify the problem and provide the right solution.

Know-how and advanced technology - that's our package.
Solving problems - that's what we do.

COMPREHENSIVE OFFER

It is convenient when all services, equipment and chemicals can be ordered from one supplier. We offer over 1500 products and a full range of cleaning services, professional advice and maintenance. This lets our customers count on a comprehensive service and attractive financial conditions.

Cleaning Agents

Nearly 150 agents for cleaning and disinfection which are able to remove all known kinds of dirt in food processing industry and maintain microbiological purity of all surfaces.

Central Cleaning Systems

Customized cleaning systems to reduce cleaning agent's consumption and working time spent on cleaning.

Sanitary Locks

Customized sanitary locks for separating production areas from other parts of the food processing plant: boot washers, hand disinfection modules, boot dryers with ozone disinfection and many accessories.

Food Grade Lubricants

Hi-Tech oils and greases approved for use in food processing plants.

Hygiene Equipment

A full range of hygiene equipment including brushes, shovels, cups etc. All made for food processing industry.

CIP Stations

Radex advises on the selection of systems, their design, and assembly at customer production plants.

SOLUTIONS FOR FOOD INDUSTRIES

We have over 1500 products suitable for use in 7 different food processing branches. With our knowledge and experience we can easily suggest the most effective solutions for each branch.

Red meat processing

White meat processing

Hatcheries

Seafood processing

Beverage industry

Fruit and vegetable processing

Bakery and confectionery

Dairy

CLEANING AGENTS

We manufacture modern cleaning agents and disinfectants for food processing industry. Our offer covers alkaline, acid and neutral liquids that are effective on a wide variety of surfaces, including those which have contact with food. Using our cleaning agents helps food manufacturers to meet the highest hygiene standards in the industry.

- ✓ **WIDE RANGE OF PRODUCTS**
over 150 formulations.
- ✓ **PARAMETER STABILITY GUARANTEED**
own production facilities,
multi-stage quality control.
- ✓ **QUICK DELIVERY**
well-developed sales network,
easy ordering system.

Termosol

Our first and most popular product, highly appreciated by the customers; it's being used in hundreds of food processing plants since 1989.

Perfectly removes tar deposits from all elements of smoke houses.

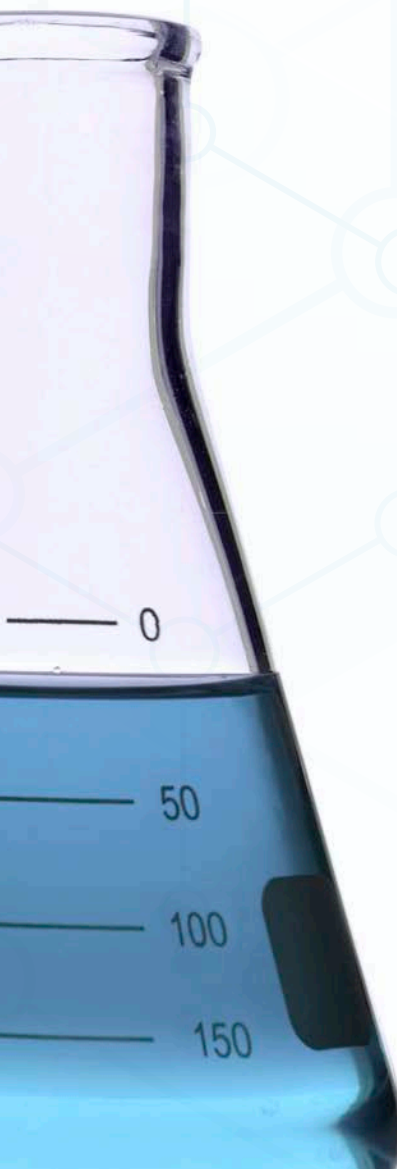

Alusol

Used for removal of fat and protein contaminations as well as rust and lime stone deposits from walls, floors and tiles.

Tesol

Excellent alkaline cleaner/disinfectant containing active chlorine. Applied by means of a foaming equipment efficiently removes all protein and fatty contaminations.

FOOD GRADE LUBRICANTS

Food Grade lubricants are recommended in hygiene directives for food processing plants. They protect lubricated surfaces from microorganisms like bacteria, molds and fungi. These lubricants are produced by JAX - an American company with over 50 years of experience and one of the world's leading lubricant manufacturers.

- ✓ **LOWER OPERATING COSTS**
extending the life of the lubricated components.
- ✓ **FOOD-GRADE APPROVED**
safe to use, globally recognized certificates: NSF, HALAL, KOSHER.
- ✓ **WIDE RANGE OF PRODUCTS**
suitable for all devices and surfaces.

FG PENETRATING OIL

It is a premium quality, high-performance penetrating oil for use in food-processing, beverage bottling, pharmaceutical production and packaging facilities. It gives outstanding performance where regulations will not allow the use of ordinary industrial lubricants.

The base oil and additives are FDA-authorized and the product carries a USDA H1 Food Grade rating. This allows the food or beverage processor to apply this product while the equipment is in operation. It is suitable for incidental food contact, which means that it is odorless, tasteless, and will not alter the integrity of the finished product.

HALO GUARD FG2

JAX Halo-Guard FG-2 grease can satisfy the lubricant demands in nearly any food plant machinery application. It's an ideal grease for general plant-wide grease lubrication. Superior water resistance, excellent compatibility with other greases, outstanding corrosion control and excellent antiwear and E.P. performance help simplify grease inventory and provide the ultimate in food-grade grease performance.

It is one of the most water-resistant food-grade greases on the market. This product benefits greatly from the easy-to-apply convenience of an aerosol package. The handy extension tube makes hard-to-reach applications easy.

MAGNA PLATE 78

Special food-grade E.P. additives and an expensive synthetic polymer have been added to the highly-refined technical mineral oil to ensure optimum antiwear and adhesion characteristics. The cold-temperature viscosity increase enables the lubricant to go into a semi-solid state after the propellants have dissipated. This reduces dripping from coldroom overhead chains or conveyors. The high temperature E.P. and polymer additives provide a constant film of protection on high-heat or high-speed bearings. JAX Magna-Plate 78 can replace nearly all of your non-fortified food-grade oils, extend the life of costly equipment, and drastically reduce downtime.

SANITARY LOCKS

Sanitary Locks separate production areas from other parts of a food processing plant. They are custom made based on individual needs of every client. A typical lock consists of a boots washer, a contactless hand disinfection station, a boot dryer with ozone disinfection and a sink with soap feeder.

RMB 02
Boots washer

Boots washers enable efficient cleaning of rubber shoes on leaving processing areas. RMB 02 consists of two sections for cleaning soles and sleeves of the shoes in order to optimize water and chemicals consumption. The rotary brushes are activated by a photocell at the entry to the boot washer. The brushes are driven by an independent low power electric motors and a solution of cleaning agent is applied directly onto the brushes.

There are 6 different boots washers in our production range designed for different applications.

SOR
Boots dryer

The boots dryers are designed to dry shoes (particularly wellingtons) after work. Hot water containing ozone provides drying and disinfection of the working shoes, thus eliminating bacteria and the threat of fungus infection development.

Different models of boots dryers are available, with the capacity for 10-60 pairs of wellingtons.

SDR 04
Hand disinfection unit

An element of sanitary locks. Designed for automatic and touchless application of disinfectant onto the hands of workers going to the production areas. It is connected to the entry gate and a photoelectric sensor of the passage. IP 44 Safety Class.

CENTRAL CLEANING SYSTEMS

Central Cleaning Systems (CCS) consist of a main pump unit (which increases the water pressure) and peripherals, such as satellite stations or mobile cleaning stations.

The advantages of our CCS are:

- patented cleaning agent dosing system,
- simple and highly reliable construction,
- modular structure of the CCS enables custom configuration.

SR 25 - 2P
Satellite station

An element of the Central Cleaning System enabling the execution of all cleaning operations. It is supplied with water from the Booster JPR/ZPR and air from the plant's compressed air network. Provided with a precise dosing unit for setting the working solution concentration. Optionally it can be supplied with default working solutions of chemicals already saved in the system.

Different models of Satellite Stations are available, depending on applications and customer's demands.

SM 2KU
Mobile main unit

Mobile Main Unit is the combination of a combination of a booster, a satellite station and a compressor. Recommended for applications where installing the complete central cleaning systems is not justified. Provides long and troublefree operation. Particularly useful in plants where compressed air installation is not available.

ZPR
Pump set

ZPR Pump Set is the heart of the central cleaning system and consists of several pump units. Modular construction allows perfect match with the customer's requirements. Each pump is provided with a Soft Start system for smooth start of the electric motor.

HYGIENE EQUIPMENT

In order to make our offer even more complementary, we provide a full range of hygiene equipment that meets all the requirements in food processing plants. Brushes, squeegees, forks and shovels are durable enough to handle intensive everyday usage. With color coding and resistance to highly corrosive chemicals, they are suitable for all food processing plant hygiene activities.

brooms and scrubbing brushes

countertop and container brushes

pipe brushers

copping block brushes

toilet brushes

bottle brushes

pastry brushes

hand brushes

mops

shovels

forks

stirrers

scoops

scrapers

squeegees

dustpans

OUR OFFER

When RADEX was established in 1989, it had only a few chemical preparations in its offer. Today, after 30 years of presence on the market and constant development, we have expanded our activity on many branches related to maintaining hygiene in food industry plants. We can provide a comprehensive service from a paper towel to central cleaning systems. **We cordially invite you to cooperate with us!**
